## CORDS FOR MACHINE BINDING

### ELASTOMER

Elastic twines with 100% stretch are wound on a conical coil, and the wrapped with a special net, thanks to which they work more efficiently on the machine. Each spool is protected against moisture and dirt by single wrapping in foil. They are available on plastic and paper coils, in various colors. The standard weight of the spool is 800g. They are most often used to bind roulades and chickens.

### SPIRALTWIST

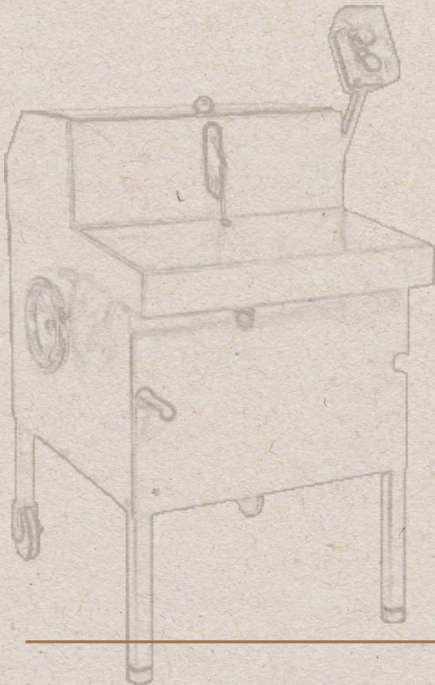

## POLYPROPYLENE CORD

PP-700 and PP-900 polypropylene twine has a cylindrical form, does not contain a coil and is unwound from the center of the spool. It is available in various colors in 2 kg coils. It is intended to use on clipping and looping machines.

PP-700 - beam length 1400m

PP-900 - beam length 1800m

---

## CORDS FOR TRADITIONAL BINDING

### ROPES FOR TYING UP

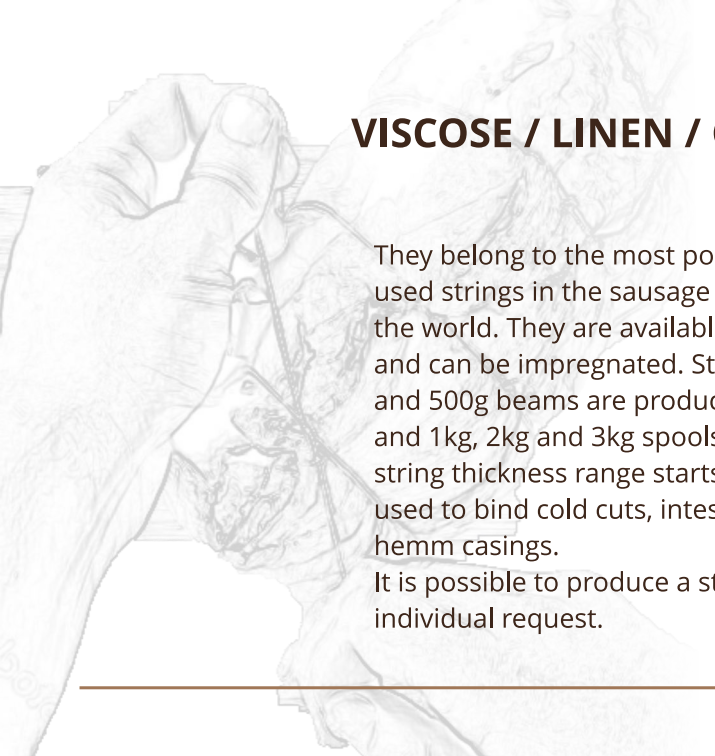

Ropes for tying up most often they are used for hanging animal half-carasses and Parma hams. They are characterized by high tensile strength, low extensibility and high resistance to abrasion and moisture absorption. There are lines with a core and without a core, from 3mm to 20mm thick.

### VISCOSE / LINEN / COTTON THREADS

They belong to the most popular and most frequently used strings in the sausage and meat industry all over the world. They are available in a wide range of colors and can be impregnated. Standard 100g, 250g and 500g beams are produced on cylindrical coils, and 1kg, 2kg and 3kg spools on conical coils. The string thickness range starts from 1mm. They are used to bind cold cuts, intestines, sausages and hemm casings.

It is possible to produce a string at the customer's individual request.
